

Cybersecurity Basics

网络安全基础

A Simple Guide for Parents

父母简单指南

Strong Passwords 强密码

- Use long and unique passwords
使用长且唯一的密码
- Example: **C34sw@2Hs_** instead of **chenfoong123**
例如用复杂密码而不是简单密码
- A password manager can help remember them
可以用密码管理器帮助记住

Phishing Scams 网络钓鱼

- Scammers send fake emails pretending to be banks or companies
骗子会发送假邮件冒充银行或公司
- They try to trick you into clicking links or giving personal info
他们会诱导你点击链接或提供信息
- Always check the sender's email address carefully
一定要仔细检查发送者

Two-Factor Authentication 双重验证

- Adds a second layer of security beyond your password
增加第二层安全保护
- Even if your password is stolen, your account stays safe
即使密码被盗账户仍然安全
- Use authenticator apps like Google Authenticator or Microsoft Authenticator
可以使用验证器应用

Safe Browsing 安全浏览

- Look for **HTTPS** in the website address

查看网址是否有HTTPS

- Avoid clicking unknown or suspicious links

避免点击不明链接

- Secure websites encrypt and protect your data

安全网站会保护你的数据

Software Updates 软件更新

- Updates fix security vulnerabilities in your software

更新可以修复安全漏洞

- Outdated apps are easier for hackers to exploit

旧版本软件更容易被攻击

- Turn on automatic updates whenever possible

建议开启自动更新

Public WiFi 公共WiFi

- Public WiFi networks are not secure
公共WiFi不安全
- Avoid logging into bank accounts or entering passwords
避免登录银行账户
- Use mobile data or a VPN for sensitive activities
更安全的方法是使用流量或VPN

Device Security 设备安全

- Use a screen lock like PIN, fingerprint, or Face ID

使用屏幕锁

- Install reputable antivirus software

安装防病毒软件

- Back up important files regularly

定期备份重要文件

Social Media Safety 社交媒体安全

- Do not share too much personal information online
不要分享太多个人信息
- Set your accounts to private
设置账号为私密
- Be cautious with friend requests from strangers
小心陌生人的好友请求

Final Tips 最后建议

- If something feels wrong, do not click
如果感觉不对就不要点击
- Ask someone you trust if you are unsure
不确定可以问信任的人
- Staying careful is the best protection
保持警惕是最好的保护
